

1. Create a folder module called – cart
2. It has an array of `lineItem` object with properties:
 - a. Product Name
 - b. Product Price
 - c. Quantity
3. It has a function to add a `lineItem` to the cart
4. It has a function to remove a `lineItem` from the cart
5. It has a function to get the total amount of the entire cart
6. The cart module is re-usable and can be imported and used in any other modules.
7. It should be possible to create many instances of cart.
